

ORDER NO. 2024-01-05 OF THE LOS ANGELES COUNTY HEALTH OFFICER

ORDER OF THE LOS ANGELES COUNTY HEALTH OFFICER

**ANNUAL INFLUENZA IMMUNIZATION
OR MASKING REQUIREMENT FOR HEALTHCARE PERSONNEL
DURING RESPIRATORY VIRUS SEASON**

Original Issue Date: Monday, August 26, 2024

Revision Date: Wednesday, September 16, 2026

Brief Highlights (Revisions are highlighted in yellow):

9/16/2026:

- The Annual Influenza Immunization or Masking Requirement for Healthcare Personnel During Respiratory Virus Season Health Officer Order remains in effect and will be reviewed each year before the Respiratory Virus Season and revised if needed; annual reissuance is not required.
- Outdated references to prior Respiratory Virus Seasons were removed.
- The description of the California Department of Public Health's Immunization Recommendations was updated to include CDPH's recommendation to vaccinate healthcare workers.
- A link to COVID-19 resources for providers was updated.

10/16/2025:

- On September 17, 2025, Governor Newsom signed Assembly Bill (AB) 144, transferring authority for vaccine recommendations in California from the CDC's Advisory Committee on Immunization Practices (ACIP) to the California Department of Public Health (CDPH).
- Under AB 144, all California providers should now follow CDPH vaccine recommendations, which may differ from ACIP, and all CDPH-recommended vaccines must be covered by California Health Plans, including Medi-Cal managed care plans, even if not recommended by ACIP.
- The bill also provides liability protection for providers administering vaccines under CDPH recommendations and authorizes pharmacists to independently initiate and administer CDPH-recommended immunizations.
- Per CDPH's 2025–26 Respiratory Vaccine Recommendations, updated COVID-19 vaccination is recommended for all individuals aged 6 months and older, including those who are planning pregnancy, pregnant, postpartum, or lactating; those with risk factors; individuals in close contact with high-risk people; unvaccinated children ages 2–18 years of age; and anyone who chooses protection.

- Healthcare Personnel (HCP) are strongly encouraged to receive both updated COVID-19 and annual influenza vaccines.

Please read this Order carefully.

SUMMARY OF THE ORDER:

This Health Officer Order (Order) requires that each year, Healthcare Personnel (HCP) in all Licensed Healthcare Facilities, except Skilled Nursing Facilities (SNF), must either: a) be immunized with an annual influenza vaccine authorized for use in the United States for the current Respiratory Virus Season, or b) wear a Respiratory Mask while in contact with patients or working in Patient-Care Areas during the Respiratory Virus Season (November 1 through March 31). Due to the nature of care provided to highly vulnerable populations, the high risk of rapid respiratory virus transmission in SNFs, and low influenza vaccination rates among SNF HCP, all HCP working in Skilled Nursing Facilities must wear a Respiratory Mask while in contact with patients or working in Patient-Care Areas throughout the Respiratory Virus Season.

BACKGROUND:

Many respiratory viruses circulate year-round in the United States and California. From late fall to spring, influenza and other respiratory viruses pose significant risks to medically vulnerable individuals and those exposed through necessity due to their circumstances. Patients, clients, and residents in healthcare settings may continue being concerned about their potential exposure to COVID-19 and influenza when they seek care, and some—most especially young children, pregnant women, elderly individuals, and persons with chronic health conditions who are immunocompromised—are at greater risk for serious complications, including hospitalization, admission to the intensive care unit (ICU), intubation or mechanical ventilation, or death, due to these infections.

Vaccine formulations that target SARS-CoV-2 and influenza provide good protection against severe disease, although vaccination does not prevent all infection or transmission. Unvaccinated individuals, however, have higher risk of infection, as well as serious complications if infected.

As such, unvaccinated HCP are not only at higher risk for infection but can also spread these respiratory viruses to their coworkers and patients. When HCP are vaccinated, there is a reduced risk to those who interact with them, especially when they are also wearing a Well-Fitted Mask.

It is recommended that each year, by the start of the Respiratory Virus Season, HCP be immunized with both the annual influenza vaccine and the most recently updated COVID-19 **vaccine** authorized for use in the United States for the current Respiratory Virus Season.

In California, acute care hospitals must offer free on-site annual influenza vaccinations to their employees. If an employee chooses not to be vaccinated, they must provide a written

declaration that he or she has declined the vaccination to the hospital. [See Cal. Health & Safety Code §1288.7(a).]

In addition, occupational safety regulations require healthcare facilities, including hospitals, SNFs, intermediate care facilities, and Emergency Medical Services (EMS) provider agencies, to make the annual influenza vaccine available to all employees with occupational exposure and ensure that each employee who declines the vaccine signs a statement declining vaccination. [See 8 Cal. Code Regs. §5199 (c)(6)(D) & (h)(10).]

On September 17, 2025, California updated [State law](#) to ensure Californians have access to life-saving vaccines and screening, transferring the authority for vaccine recommendations in California from the CDC's Advisory Committee on Immunization Practices (ACIP) to the California Department of Public Health (CDPH). Under this law, all healthcare providers in California should follow [CDPH vaccine recommendations](#), which differ from those of ACIP. [California health plans](#), including [Medi-Cal managed care plans](#), are required to cover all vaccines recommended by CDPH, even if ACIP does not recommend them. The bill also provides liability protection for providers who administer vaccines according to CDPH guidance and allows pharmacists to independently initiate and administer these immunizations.

According to CDPH's Immunization Recommendations, updated COVID-19 vaccination is advised for all individuals aged 6 months and older, including those who are planning pregnancy, pregnant, postpartum, or lactating; those with risk factors; individuals in close contact with high-risk people; unvaccinated children ages 2–18 years of age; **all healthcare workers**; and anyone who chooses protection.

Based on CDPH's recommendations, all HCP are recommended to receive the updated **COVID-19 vaccines** in addition to the annual influenza vaccine.

Given the elevated risk of severe outcomes and rapid transmission of respiratory viruses in SNFs, combined with SNF HCP influenza vaccination rates falling below 50% for **the prior season**, this Order requires HCP in Skilled Nursing Facilities to wear a Respiratory Mask while in contact with patients or working in Patient-Care Areas throughout **the** Respiratory Virus Season (November 1 through March 31).

In Los Angeles County, a Health Officer Order requiring that HCP be either vaccinated against influenza or masked while in contact with patients or working in Patient-Care Areas, has been issued annually since 2013.

It remains essential to continue efforts to increase immunization rates to protect both HCP and the patients they serve. We strongly encourage other licensed and unlicensed healthcare and direct care entities to voluntarily adopt the same measures for their employees to protect their personnel and patients during the Respiratory Virus Season.

This Order is effective within the County of Los Angeles Public Health Jurisdiction, defined as all cities and unincorporated areas within the County of Los Angeles, except for the cities of Long Beach and Pasadena, which must follow their respective City Health Officer orders and guidance. This Order will continue until it is revised, rescinded, superseded, or amended in writing by the County Health Officer.

**UNDER THE AUTHORITY OF CALIFORNIA HEALTH AND SAFETY CODE (HSC)
SECTION 120175, THE COUNTY OF LOS ANGELES HEALTH OFFICER ORDERS:**

- 1) Purpose.** Influenza and COVID-19 continue to pose significant risks to people in Los Angeles County. Vaccination remains the most effective strategy to prevent serious illness, such as symptoms that require hospitalization, cause difficulty breathing, or lead to life-threatening complications and death from these respiratory illnesses. When HCP are vaccinated, there is a reduced risk to patients and colleagues who interact with them.

This Order continues the annual requirement that Licensed Healthcare Facilities within the County of Los Angeles public health jurisdiction implement a program under which Healthcare Personnel: a) receive annual influenza vaccine authorized for use in the United States for the current Respiratory Virus Season; or b) wear a Respiratory Mask while in contact with patients or working in Patient-Care Areas throughout the Respiratory Virus Season.

- 2) Intent.** The primary intent of this Order is to lower the risk of influenza and respiratory virus transmission to patients and staff by requiring all Licensed Healthcare Facilities in Los Angeles County, with the exception of Skilled Nursing Facilities, to require HCP (as defined in Paragraph 4b) who decline an annual influenza vaccine to wear a Respiratory Mask (as defined in 4c) while in contact with patients or working in Patient-Care Areas throughout the Respiratory Virus Season (November 1 through March 31) as a protective measure.

In addition, due to a higher number of respiratory virus outbreaks with rapid transmission observed in SNFs, this Order requires all HCP in SNFs to wear a Respiratory Mask while in contact with patients or working in Patient-Care Areas throughout the Respiratory Virus Season, regardless of vaccination status, to lower the risk of respiratory virus transmission to particularly vulnerable patients.

- 3) Licensed Healthcare Facilities Subject to this Order.** This Order applies to the following licensed health care facilities:

- a. Licensed Healthcare Facilities:
 - i. General Acute Care Hospitals*
 - ii. Skilled Nursing Facilities (including Subacute Facilities)*
 - iii. Intermediate Care Facilities*
 - iv. Emergency Medical Services (EMS) Provider Agencies
 - v. Congregate Living Health Facilities*
 - vi. Chemical Dependency Recovery Hospitals*
 - vii. Acute Psychiatric Hospitals*

- viii. Dialysis Centers
- ix. Home Health Agencies
- x. Primary Care Clinics
- xi. Ambulatory Surgery Centers
- xii. Hospice Facilities*

4) Definitions. For purposes of this Order, the following terms are defined as follows:

- a. **Respiratory Virus Season.** The term “Respiratory Virus Season” refers to November 1 of one year through March 31 of the following year. If surveillance data in a particular year demonstrate that the respiratory virus season is different than November 1 to March 31, this period may be amended in an updated order.
- b. **Healthcare Personnel.** The term “Healthcare Personnel (HCP)” refers to all paid and unpaid employees, contractors, students, volunteers, and Emergency Medical Services Healthcare Personnel, who have direct patient contact or work in Patient-Care Areas in Licensed Healthcare Facilities subject to this Order and the prehospital care setting (e.g., any setting in which medical care is provided prior to the patient’s arrival at a hospital). This includes, but is not limited to, physicians, nurses, aides, physical therapists, emergency medical technicians (EMTs), paramedics, contract workers, students, volunteers, registration/reception staff, housekeeping, and maintenance personnel.
- c. **Respiratory Mask.** The term “Respiratory Mask” refers to what can be a surgical, procedure, or N-95 mask also designated by some manufacturers as isolation, dental, or medical procedure facemasks.
- d. **Patient-Care Areas.** The term “Patient-Care Areas” refers to areas in facilities that include, but are not limited to, patient or resident rooms and areas where patients receive diagnostic or treatment services, can be taken for procedures or tests, and are allowed to be present (e.g., elevators, hallways, and nurses’ stations). These areas also include any prehospital setting in which EMS personnel are in contact with patients and other areas facility administrators deem could result in exposure to patients and possible disease transmission.
- e. **Licensed Healthcare Facilities that provide Inpatient Care.** This term refers to Licensed Healthcare Facilities to which persons are admitted for a 24-hour stay or longer, and includes only General Acute Care Hospitals, Skilled Nursing Facilities (including Subacute Facilities), Intermediate Care Facilities, Congregate Living Health Facilities, Chemical Dependency Recovery Hospitals, Acute Psychiatric Hospitals, and Hospice Facilities [See Licensed Healthcare Facilities noted with an asterisk, listed in Paragraph 3a) subsections (i), (ii), (iii), (v), (vi), (vii), and (xii).]

5) Influenza Vaccination Requirement. All employees of a Licensed Healthcare Facility with the exception of Skilled Nursing Facilities (as defined in Paragraph 3a) who meet the definition of Healthcare Personnel (as defined in Paragraph 4b) must receive an annual influenza vaccine authorized for use in the United States for the current Respiratory Virus Season prior to or during the Respiratory Virus Season, annually defined as

November 1–March 31, or wear a Respiratory Mask while in contact with patients or working in Patient-Care Areas.

By November 1 of each Respiratory Virus Season, HCP who decline an influenza immunization, as described above, must provide their employer, on a form provided by their employer, a written declaration that they have declined influenza vaccination. HCP who decline or have not yet obtained an annual influenza vaccine authorized for use in the United States for the current Respiratory Virus Season must wear a Respiratory Mask while in contact with patients or working in Patient-Care Areas for the duration of the Respiratory Virus Season.

- 6) Masking Requirement for Skilled Nursing Facilities.** All persons who meet the definition of Healthcare Personnel (as defined in Paragraph 4b) within Skilled Nursing Facilities must wear a Respiratory Mask, regardless of vaccination status, while in contact with patients or working in Patient-Care Areas during the Respiratory Virus Season (November 1–March 31).
- 7) Maintenance of Records.** Consistent with applicable privacy laws and regulations, the operator of the Licensed Healthcare Facility must maintain records of all HCP vaccination or declination status.
 - a. The facility must provide such records to the Los Angeles County Department of Public Health or their designee promptly upon request, and in any event, no later than three business days after receiving the request.
 - b. Operators of the facilities subject to the requirement must maintain records with the following information: (1) full name and date of birth of HCP; (2) vaccine manufacturer; and (3) date of vaccine administration.
 - c. For unvaccinated workers: a declination form signed by the unvaccinated HCP.
- 8) Reporting.** Upon request by the Los Angeles County Department of Public Health or the EMS Agency, facilities and EMS provider agencies must report their HCP influenza rate within the requested timeframe either through the CDC's National Healthcare Safety Network or a tool provided by the Los Angeles County Department of Public Health or the EMS Agency.
- 9) Masking and Other Infection Control Policies and Practices.** Nothing in this Order limits otherwise applicable requirements related to Personal Protective Equipment, personnel training, and infection control policies and practices.
- 10) Access to Vaccinations.** All Licensed Healthcare Facilities covered by this Order are encouraged to provide onsite vaccinations for HCP and all employees, easy access to nearby vaccinations, and education and outreach on vaccinations. Of note, facilities must also comply with vaccination related and other requirements set forth by California law and/or occupational safety regulations that apply to their site.
- 11) Copies.** The County shall promptly provide copies of this Order by: (a) posting it on the Los Angeles Department of Public Health's website: publichealth.lacounty.gov, (b) providing it to any member of the public requesting a copy, and (c) issuing a press release to publicize the Order throughout the County.

COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC HEALTH
ORDER OF THE HEALTH OFFICER

- 12) Severability.** If any subsection, sentence, clause, phrase, or word of this Order or any application of it to any person, structure, gathering, or circumstance is held to be invalid or unconstitutional by a decision of a court of competent jurisdiction, then such decision will not affect the validity of the remaining portions or applications of this Order.
- 13) Amendments to Order.** This Order may be revised or amended in the future to reflect evolving local or overarching public health conditions.
- 14) Statutory Authority.** This Order is issued pursuant to California Health and Safety Code (HSC) section 120175.
- 15) Issue Date.** This Order is issued on **Wednesday, September 16, 2026**, and will continue until it is revised, rescinded, superseded, or amended in writing by the County Health Officer.

IT IS SO ORDERED:

A handwritten signature in blue ink, appearing to read 'Muntu Davis, M.D., M.P.H.', is written over a horizontal line.

Muntu Davis, M.D., M.P.H.
County Health Officer, County of Los Angeles
