School testing data may include repeat tests for a unique individual. Test types reported by schools include PCR, rapid antigen, and over-the-counter tests. For the weeks of Nov 22, 2021, December 20, 2021 – January 2, 2022 and April 11, 2022, testing volume decrease was due to districts/schools being closed for breaks.

COVID-19 Vaccines and Boosters Still Offer us the Best Protection

- Despite the more transmissible Omicron variant, vaccines and boosters continue to prevent cases, hospitalizations, and deaths.

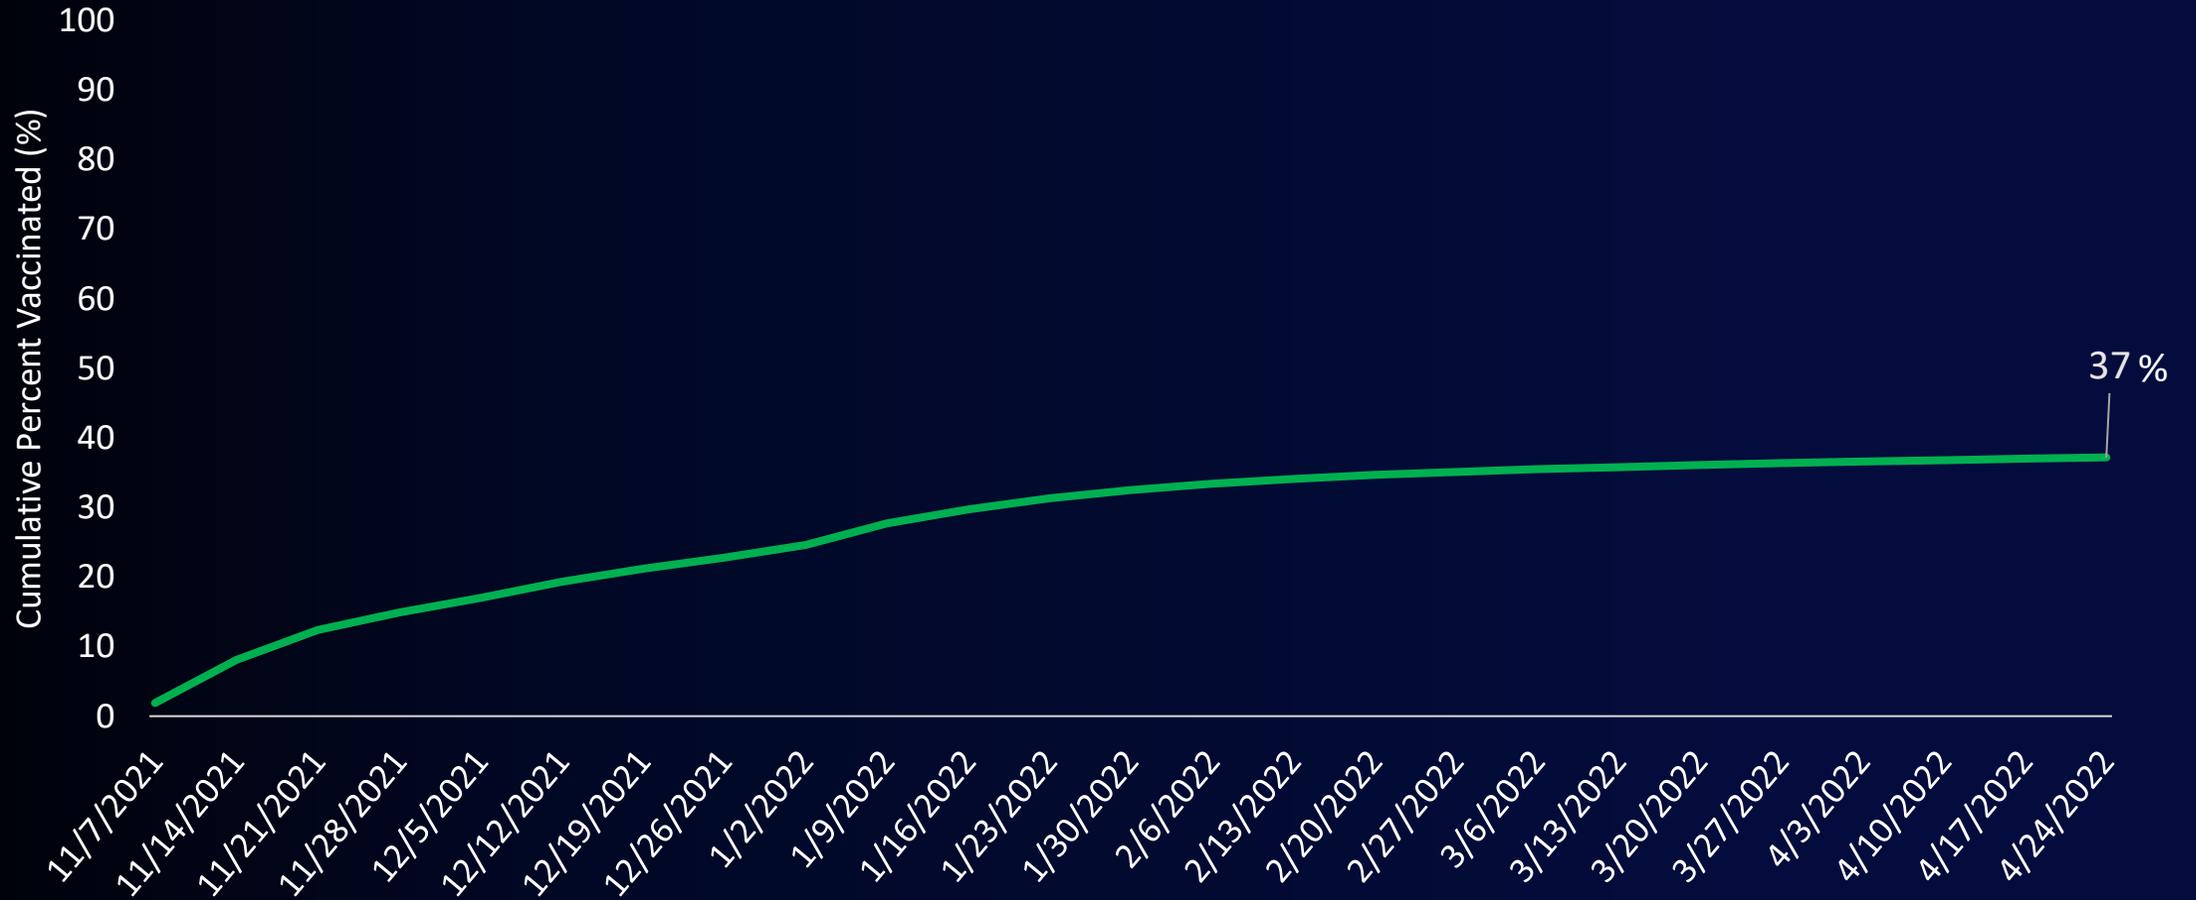

- While prior infection and vaccinations build immunity, vaccination is the safer way to build immunity.

- Immunity wanes, regardless of whether it was derived from prior infection or vaccination.

- Boosters significantly improve protection against the Omicron variant, including for previously infected people.
