# WORLD TB DAY

World TB Day occurs on March 24th every year. It raises public awareness about Tuberculosis which continues to be a global epidemic affecting millions. Although TB is preventable and treatable, it remains the 13th leading cause of death worldwide.

In efforts to promote and increase TB awareness, many organization take action and participate in community outreach events including Light up the World campaign, sharing: local data TB education and training materials, patient resources, and more.

This network plans and implements activities that foster education and equitable access to screening treatment.
